

Ground Stabilising Pavers

Description

A unique and innovative ground stabilisation technology that is easy to use and quick to install. Our Ground Stabilising Pavers have been engineered for use in multiple applications ranging from soil & turf stabilisation for the enhancement of water saving measures. Often used to reinforce roads in and around construction sites, these heavy duty pavers are also perfect for farms, stables, yards, paddocks and other livestock areas.

Key Features and Benefits:

- Increase ground stability and water conservation
- Load rating of 1,200 tonnes per square metre
- A safe and cost effective substitute for concrete in many applications
- Environmentally friendly - Made from 100% recycled plastic
- Lightweight design reduces logistic costs
- Non-reactive to solvents, oils, chemicals and water
- Non-toxic to humans, animals and plants
- Designed and manufactured in Australia
